Elkay... dedicated to a better tomorrow

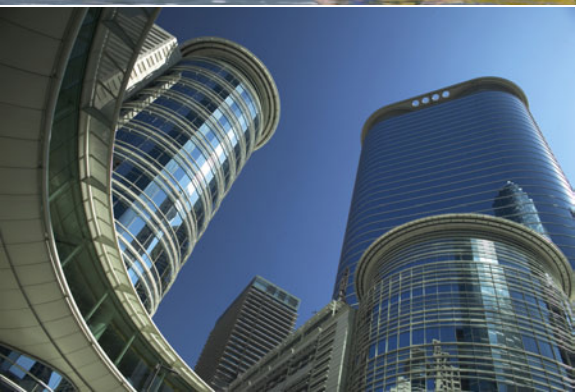

In recent years, our endangered environment and eco-system has brought the need for sustainability into sharper focus. "Green" is a permanent movement that evolved due to the escalating concern for the sustainability of our planet. One of the key elements of this growing commitment to conservation and sustainability is bringing durable and efficient products to market.

For close to 90 years Elkay has been dedicated to manufacturing high quality products that exceed customer expectations. Most recently our efforts have focused on environmentally-sustainable products designed to conserve the earth's resources and last into the future.

Our company is no newcomer to the green movement, as we have produced environmentally-sound plumbing products for many years. As we continue to keep energy and water conservation at the forefront of our product development, we are also committed to offering sinks, faucets, water coolers and drinking fountains that are produced from recycled materials. In addition, our manufacturing facilities are designed for maximum efficiency to generate as little scrap as possible.

Elkay's conservation and sustainability efforts are not limited to products. Our packaging is constructed with up to 56 percent recycled content, and most are 100 percent recyclable, as are the majority of our product components.

One of Elkay's six core values is: We Are In Business Forever. Our conservation and sustainability efforts are a reflection of Elkay's commitment to this principle and to our concern for a better tomorrow.

water coolers + drinking fountains

Millions of plastic water bottles are added to our landfills every year. ElKay water coolers and drinking fountains eliminate this waste and deliver environmental advantages that clearly make them the preferred choice for drinking water in commercial environments.

- First and only company to bring a **GreenSpec® Listed** water cooler to the market (VRCGRN Series)
- First manufacturer to convert to refrigerants with an ozone-depletion potential (ODP) ratio of 0%
- Exceed all energy-efficiency standards
- Many components made from recycled content, including stainless steel, galvanized steel, brass and corrugated cardboard
- Product packaging and the majority of our components are recyclable
- The only producer that still assembles water coolers in the United States.
- Our Savanna, Illinois facility is centrally located for efficient distribution within the United States

our first GreenSpec® listed cooler

VRCGRN8

The innovative ElKay VRCGRN water cooler series provides greater energy efficiency, consumes less water and uses less refrigerant than any other comparable water cooler on the market. Primarily constructed in 60% recycled content stainless steel, the VRCGRN is manufactured without paints or coatings eliminating Volatile Organic Compound (VOC) emissions. This highly durable water cooler utilizes a low-flow bubbler reducing the amount of water wasted down the drain. With these benefits, plus the highly recyclable content, the VRCGRN is the responsible choice.

Based on average market performance, the VRCGRN offers:

- More than 50% greater energy efficiency †
- Nearly 40% less water usage †
- Nearly 8% less refrigeration usage †
(Less Used = Less Recovery)

Optional accessory package

- Our high-grade 1,500 gallon capacity WaterSentry® water filter and easy-to-operate glass/bottle filler
- Makes re-filling simple and saves 12,000 plastic bottles (16 oz) per filter

sinks + countertops

Elkay commercial sinks and countertops are constructed of high quality, 300 series stainless steel: one of the most environmentally friendly materials available. In addition, all Elkay stainless steel sinks and countertops are designed and built to last, making them the ideal choice for classrooms, restaurants, cafeterias and other commercial applications.

- Stainless steel never drops out of the recycling chain and can be reclaimed without waste
- Constructed of 60% recycled content †
- Average life of up to 30 years †
- Most are 100% recyclable †

faucets

To complement our sink and countertop selection, Elkay commercial faucets start with a foundation of recyclable brass, one of the most durable materials available. Designed for long-lasting reliability, Elkay commercial faucets exceed national requirements for lead-free design, are equipped with a ceramic disc cartridge and meet or exceed the national standard of 2.2 gallons per minute (GPM) for water conservation. In addition, most Elkay commercial faucets comply with NSF 61, which ensures safe, clean water is dispensed.

- Include a low flow **.5 GPM aerator** for maximum water conservation
- Built to last for years of service
- Recyclable brass material^{††}

Elkay Metering Faucets

- 2.2 GPM
- Adjustable 2-15 second cycle time

Elkay + green

With a focus on producing sustainable products, Elkay uses accepted green principles, such as recyclability, and the criteria established by the Leadership in Energy and Environmental Design (LEED®) as guidelines for product design. (LEED® is a third party certification program developed by the U.S. Green Building Council to award points for both new construction and renovations.) The following are a few examples of the adopted guidelines and the supporting eco-friendly Elkay products available.

- **Energy + Atmosphere: optimize energy performance**

Intent: Achieve increasing levels of energy conservation and reduce environmental impacts associated with excessive energy use.

WATER COOLERS

- **Energy + Atmosphere: enhanced refrigeration management**

Intent: Reduce ozone depletion and support early compliance with the Montreal Protocol while minimizing direct contributions to global warming.

WATER COOLERS

- **Water Efficiency: water use reduction**

Intent: Maximize water efficiency to reduce the burden on municipal water supply and wastewater systems.

WATER COOLERS

FAUCETS

- **Materials + Resources: recycled content**

Intent: Increase demand for building products that incorporate recycled content materials; therefore reducing impact resulting from extraction and processing of virgin materials.

WATER COOLERS

SINKS

COUNTERTOPS

- **Materials + Resources: resource reuse (recyclability)**

Intent: Reuse building materials and products to reduce demand for virgin materials and thus reduce waste.

ELKAY®

Coast-To-Coast Elkay Sales Network

Our national sales presence and extensive distributor base provide excellent service and convenience. For the name of your nearest Elkay Sales Rep or Wholesaler:

- Visit the "Where to Buy" area on elkayusa.com
- Call Customer Care at 630.572.3192

Elkay Technical Support

- Help is always just "One Call" away.
- Trained factory technicians available during business hours, 5 days a week
- 98% of technical service inquiries handled on the first call

Visit elkayusa.com

- Up-to-date product specification sheets
- Current catalog and pricing
- Local sales rep locator
- Warranty information
- Where to buy our products
- Service information
- How to contact Elkay
